What's New in the MFlanger?

MFlanger is a 16-output flanger effect plug-in with outstanding sound quality. In addition to shaping the perceived sound of the flanger by means of the shape knob and a highly responsive algorithm, it features an adjustable tube saturation, a resonator, a chroma and a global preset manager which saves and loads its settings automatically. High-quality sounds with transparent feedback With MFlanger's effects (chorus, distortion, flanger, phaser, waveform looper) in combination with a global preset manager, even a single movement of the shape knob can create a gigantic modulation effect. A variable Oscillator Shape Oscillators are as important as modulation, so we decided to combine the oscillator with the first flanger to form a completely new flanger. The effect can be further shaped by further oscillators, so MFlanger can vary between original flangers, transtive flangers, flangers with high feedback, flangers with a gentle sound or even flangers with great sound variations. The Modulator lets you individually choose up to 4 modulation amounts. Precisely control all the modulation amounts individually Every aspect of the flanger can be precisely controlled individually using the MIDI Learn Mode. Choose between high quality sounds with transparent feedback, or for a flanger with only part of the modulation signals. Global Preset Management Thanks to its global preset manager, MFlanger lets you save your settings in the GUI and access them in other files with only one click. MFlanger can automatically make settings for you and display them in the same, clear fashion. Morph between multiple banks Morph between banks of settings, with each bank being dedicated to a different sound, for example for different flanger settings. This lets you save time when you switch to a different flanger, and makes the plugin "smart" for you. We have created this feature to make it easier for you to customize your flanger in any way you like. Morph between banks of settings for a flanger, chorus, phaser, distortion, looper or waveform Change sounds instantly using your DAW's macro system. MFlanger's global preset manager offers a bank of effects presets for all of its most important effects such as: Chorus and Phaser: Flanger, Chorus, Phaser, Delay, Wah wah, Noise Distortion
